SUMMARY

Backend-focused software developer working in Python, Django and REST APIs. At Gravityer I build Google Ads API integrations, from OAuth 2.0 through lead sync. Outside work I have built a Celery and Redis workflow engine and the website for ListenInn Foundation, the mental-health NGO I founded.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Java

Backend: Django, FastAPI, Node.js, Express, REST APIs, OAuth 2.0, JWT, Celery, WebSockets, SQLAlchemy

Frontend & Databases: React, Tailwind CSS, HTML, CSS; PostgreSQL, MongoDB, SQL Server, Redis, Supabase

Data & ML: Pandas, NumPy, SciPy, Matplotlib, Seaborn, Hugging Face Transformers, Power BI, Excel

APIs & Tools: Google Ads API, Gemini API, Claude API, Git, Docker, nginx, pytest, Playwright, Vercel

EXPERIENCE

Gravityer

Software Developer Intern

Mon 2026 – Present
India

- Integrate the Google Ads API, covering OAuth 2.0 authorization, campaign workflows, lead sync and analytics.
- Build backend features and REST APIs in Python and Django.
- Write third-party integrations and automation workflows that reduce manual work in business processes.
- Debug production issues and ship fixes through the team's Git workflow.

ListenInn Foundation

Founder & Technical Head

Mon 2025 – Present
India

- Founded a mental-health NGO; run its volunteer team and awareness campaigns.
- Built and maintain the foundation's website (React 19, TypeScript, Vercel); its Gemini help assistant sits behind a serverless proxy, answers only about the foundation and has a local fallback.
- Moved admin login into a serverless function and counseling-content edits behind a password-gated Supabase API.

Arka Build Constructions

Technical Head

Mon YYYY – Mon YYYY
Lucknow, India

- Maintained the company website and web tools, from responsive UI and performance fixes to backend integrations.
- Turned team requests into web changes and kept technical docs, project data and reports up to date.

PROJECTS

Workflow Automation Engine | Python, FastAPI, Celery, Redis, PostgreSQL, React, Docker

GitHub

- Self-hostable engine where users draw DAG workflows on a React Flow canvas; each node runs as an asynchronous Celery task on a per-type queue, retried only on transient errors.
- Wrote the DAG validator (Kahn topological sort, cycle and config checks) and readiness scheduler as pure Python with no database or queue imports; the backend has 44 passing unit tests.
- Streamed live run status over Redis pub/sub and WebSockets; added cron (RedBeat) and idempotent webhook triggers, argon2 cookie auth with rotating refresh tokens, and Fernet-encrypted credentials.

LinkedIn Post Bot | Python, Gemini API, Playwright, Pydantic, Docker

GitHub

- Telegram bot that drafts LinkedIn posts with Gemini as Pydantic-typed output, plus a matching SVG image card.
- Treats model output as untrusted. An lxml guard rejects unsafe SVG, headless Chromium measures text for overflow, overlap and contrast, and failing cards go back to the model for up to three repair rounds.

aiciv: Verified-Knowledge Simulation | Python, NumPy, SciPy, pytest

GitHub

- Reproducible multi-agent simulation where only a statistical verifier (hypothesis tests: Welch t-test or ANCOVA, Benjamini-Hochberg) can promote a claim to knowledge; trial records are HMAC-signed.

EDUCATION

B.Tech, Computer Science and Engineering, **BBD Engineering College**, Lucknow, India

2022 – 2026

Coursework: Data Structures and Algorithms, OOP, DBMS, Operating Systems, Computer Networks

Intermediate (Class XII), Physics, Chemistry, Mathematics, **RPM Children's Academy**

2022

CERTIFICATIONS

Data Science, ShapeMySkills | Web Technologies, Softpro India Ltd. | Java Programming, Softpro India Ltd.
